DETAILED ACTION

Claims 1-31 are pending in this action.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) and (5) because: (1) reference character “32” has been used to designate both contact lenses (Specification, page 31) and acquiring means (Fig. 2); reference character “38” has been used to designate both a network (Fig. 1) and acquiring means (Specification, page 31); and (3) they include the following reference character(s) not mentioned in the description: 60.

Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-31 are allowed.

Claim 1

The prior art of record neither anticipates nor fairly and reasonably renders obvious the apparatus of claim 1 of contact lens user support system comprising: a multiplicity of user client apparatuses for use by a multiplicity of users who use contact lenses, each apparatus including image signal acquiring means for acquiring an image signal of a contact lens used by each user; a server apparatus for use by a supporting entity, the apparatus including evaluation data calculating means for deriving lens condition evaluation data for evaluating the condition of the contact lens on the basis of the contact lens image signal; memory means for storing information able to be read out by the server apparatus; and communication network means enabling sending and receiving of signals between the user client apparatuses and the server apparatus, wherein the image signal acquired by the image signal acquiring means of the user client apparatus with the contact lens used by the user as a subject is transmitted via the communication network means to the server apparatus; the lens condition evaluation data for the contact lens is derived by the evaluation data calculating means of the server apparatus, the lens condition evaluation data being associated with identifying information of the user and stored in the memory means; and the lens condition evaluation data is transmitted via the communication network means to the user client apparatus so as to be provided to the user.

The most remarkable prior art is Dziabo, Jr. et al, US 5,213,760, that discloses a method and system for signaling a lens user when the lens are overworn including adding tint to the lens that changes color when the lens is near the end of its lifetime (see, e.g., Abstract and columns 2-9), but does not anticipate nor reasonably render obvious a system of claim 1 including

comprising evaluation data calculating means for deriving lens condition evaluation data, storing information, sending and receiving signals between the user apparatus and server, and transmitting lens evaluation data to the user.

Another remarkable prior art is Toshima et al., US 7,374,285 B2, that discloses a system and method for determining contact lens power including entering information on the eye, transmitting the information to a server, determining an eyeball model, selecting a lens power based on the eyeball and transmitting the information to the user, but does not anticipate nor reasonably render obvious a system of claim 1 including comprising evaluation data calculating means for deriving lens condition evaluation data, storing information, sending and receiving signals between the user apparatus and server, and transmitting lens evaluation data to the user. Furthermore, Toshima et al. has a foreign priority date of April 25, 2002, or 10 days later than applicant's, and thus does not qualify as prior art.

Claims 2-21

Claims 2-21 are dependencies of independent claim 1 and are allowable over the prior art for the reasons identified above with respect to claim 1.

Claim 22

Claim 22 is directed to a contact lens user support method with steps that are parallel to and consistent with the functions of the components of the system of claim 1 and is allowable over the prior art for the reasons identified above with respect to claim 1.

Claims 23-31

Claims 23-31 are dependencies of independent claim 22 and are allowable over the prior art for the reasons identified above with respect to claim 22.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
